

Belgian Malts that Make Your Beer So Special

Gruit Ale

Description

Gruit, a mixture of herbs and spices used to balance the malt sweetness, flavour, and aromatize beer before the use of hops in the Middle Ages (as well as a means of taxing beer production) is no longer popular. And yet great beer can be brewed with it.

This recipe presents a golden coloured beer, with malt sweetness and a great harmony with the aromas and flavours brought by the added Gruit. This beer is refreshing and should be served fresh.

This recipe is provided by Castle Malting®.

Please note that this recipe is just a guideline. Some modification might need to be done to meet different technologies, efficiencies and ingredients yield as grain dry extract and hop alpha acid percentage.

	Beer recipe	
	RECIPE FOR 100L	
Ver	MALT	
Château Pilsen 2RS		70% / 12.7 kg
Château Munich		20% / 3.6 kg
Château Crystal®		10% / 1.8 kg
	YEAST	
SafAle US-05		80 g
	GRUIT	
Juniper berries		250 g
Caraway		25 g
Rosemary		15 g
Cloves		15 g
Cardamon		15 g
Вау		3 leaves

Mashing temperature

Step 1: Mashing

Mash-in and follow the profile below:

pН	5.3	Mix Ratio	3.0 L/kg
Mash-in at 67°C.			
Deat fam Eduation at (700		

ingredients yield as grain dry extract and hop	Mash-in at 67°C.
alpha acid percentage.	Rest for 50min at 67°C.
For further information 0, convict places contacts	Rise to 72°C at 1°C/min.
For further information & service please contact: info@castlemalting.com	Rest for 15min at 72°C and do the Iodine Test
Info@castienraiting.com	Rise to 78°C at 1°C/min.
Brewing is an experiment! Brew your own beer!	Rest for 2min at 78°C to mash out .
Send us your recipe, and we'll be pleased to publish it on our website	Once the mash is done, filter and sparge with water at 78°C.
publish it off our website	

Step 2: Boiling

Boil for 60min.

Gruit addition: After 10min add Gruit.

Whirlpool to remove the trub.

Step 3: Fermentation and Maturation

Cool down the wort to 18°C and pitch the yeast. Ferment at 18°C for 1 day then rise to 22°C. Once the fermentation is done (FG reached and off flavours removed – about 7 days), drop the temperature to 8°C and rest for 1 day and then harvest the yeast. Drop the temperature to 2°C and rest for 7 days.

2.14⁰P Attenuation 80% FG

Step 4: Cold Aging and Packaging

Cold age the beer at -1°C for 5 days, remove the residual yeast and carbonate until 4.7 g/L of CO2. The beer is ready for packaging and drinking. Enjoy!
