

Belgian Malts that Make Your Beer So Special

Dunkel Bock

Beer recipe

RECIPE FOR 100L

MALT

Château Pilsen 2RS	28% / 6.2 kg
Château Vienna	30% / 6.6 kg
Château Munich	38% / 8.4 kg
Château Black	4% / 0.9 kg

HOPS

Hallertau Tradition (5.5% aa)	200 g
-------------------------------	-------

YEAST

SafLager W-34/70	100 g
------------------	-------

Mashing temperature

ABV 6.2%

Color 60
EBC

Bitterness
25 IBU

Description

Typical Dunkel Bock with Vienna and Munich malts to give a good and rich malty character and a small addition of roasted malt for color adjustment. Long boil to enhance the Maillard notes and addition of only one noble hop to promote a moderate bitterness to balance the full body of this beer.

Service:

Temperature: 4-6°C

BREWER'S TIPS

Mashing: Do the first amylolytic rest around 66-68°C to promote a full-body beer as part of this style. Keep the carbonation low to medium as part of the style.

Step 1: Mashing

Mash-in and follow the profile below:

pH	5.3	Mix Ratio	2.7 L/kg
----	-----	-----------	----------

Mash-in at 66°C
Rest for 60min at 66°C
Rise to 72°C at 1°C/min
Rest for 15min at 72°C and do the **Iodine Test**
Rise to 78°C at 1°C/min
Rest for 2min at 78°C to **mash out**

Once the mash is done, filter and sparge with water at 78°C

Step 2: Boiling

Boil for 90min.
Hop addition 1: After 30min add 130g of H. Tradition (22.5 IBU)
Hop Addition 2: After 80min add 70g H. Tradition (2.5 IBU)
Whirlpool to remove the trub

Total evap	9.0%	Batch size	100L	OG	14.0°P	Efficiency	85%
------------	------	------------	------	----	--------	------------	-----

Step 3: Fermentation and Maturation Cool down the wort to 12°C and pitch the yeast. Ferment at 12°C for 2 days then rise to 15°C. Once the fermentation is done (FG reached and off-flavors removed – about 7 days), drop the temperature to 8°C and rest for 1 day, and then harvest the yeast. Drop the temperature to 2°C and rest for 10 days.

Attenuation	80%	FG	2.95°P
-------------	-----	----	--------

Step 4: Cold Aging and Packaging

Cold age the beer at 0°C for 5 days, remove the residual yeast, and carbonate until **2.4 volumes of CO2**. The beer is ready to package and drink. Enjoy!

*For refermentation in the bottle, add brewing sugar and SafAle F-2.
